

SECP redesign — hi-fi screens

Calm surfaces, evidentiary typography, sealed-by-default trust language. Every state shown below is producible by the real backend today — nothing implies OpenBao is connected, a resolver is active, infrastructure was contacted, or that approval grants execution. Companion documents: written blueprint - current-UI baseline.

01 - APPLICATION SHELL + OVERVIEW — decisions first, status truth, no vanity metrics

Targets

Execution targets reached only through versioned plugins — never directly.

This milestone is read-only. Provisioning is not enabled; discovery runs only through the Temporal worker. Registering a target stores non-secret configuration and an opaque secret reference — no endpoint is contacted.

Register target

TargetStatusApproved BoundaryLatest EvidenceLive Access

Lab Proxmoxlab-proxmox-01 · proxmox pluginRegistered2 nodes · 1 segment · 10.60.0.0/16 · VMID 90000-90999Passsimulated · 7/3Scaled

Staging Alphastaging-alpha · proxmox plugin · stagingRegistered1 node · 1 segment · host-only · no uplink · 7/3Passsimulated · Authorizedresolver sealed

3 targets · secret references are opaque pointers — this interface never holds a secret

03 - TARGET DETAIL — one hub per target; the access chain makes "configured + authorized + ready" physically visible
